Variables

1. Variable group is collection of attributes for device and each attribute is defined as variable.
2. These are like functional, storage and configurational attributes of a device.
3. User can create one or more variables at once using addVariable in corresponding group variable.

Example

SNMP_MIBS

- CALL_WAITING_DISABLE
- CALL_WAITING_ENABLE
- SHOW_SYSTEM_DESC
- SYSTEM_NAME
- CPU Utilization
- Memory Size
- Disk Storage Capacity
