TESTBED

It is a test execution environment which contains the device and information required for running the regression.

Existing Table represents the testbeds available where testbedName represents name of the testbed, Node Names represent system through which the testcase environment configured.

Devices in the testbed can be changed using the configure button.

Add Testbed will navigate to the page where few parameters like testbedName, required node should be dragged to selected Nodes table and variables can be added based on the requirement for configuration.
