

Regression Testing is a type of software **testing** to confirm that a recent program or code change has not adversely affected existing features. It’s nothing but a full or partial selection of already executed **test** cases which are re-executed to ensure existing functionalities work fine.

In this View regression will display the details like Regression name, User, Status(completed or not), Start Time, and few options (Regression details, Download log which provides log record in HTML, Text and Excel sheet format, Delete, Rerun failed testcase).

On clicking View regression, it will navigate to regression details page where data like passed, No run, failed testcase will be displayed on chart(pie or bar) for the particular job.

On Clicking view Details, Another detailed table for list of testcases in the regression which displays the test Id, testcase name, status, start time, end time, duration will be shown.
